Construct your clients dream gravel driveway with Gravelrings

A sweeping, beautiful gravel driveway creates a welcoming approach to the home. An approach your clients are proud to show-off to any neighbours or visitors that may pass. A sign of exceptional craftsmanship is the ability to construct a gravel driveway that remains perfect with time and use.

ORDER YOUR FREE GRAVELRINGS SAMPLE

Gravelrings by Beauxfort, creators of distinctive landscaping systems, are the worst kept secret to a perfect gravel driveway. With 20 years' experience in the landscaping industry, Beauxfort have assisted landscaping professionals across the UK, in elevating their projects, by manufacturing innovative products that solve the common pitfalls of gravel surfaces.

Among clients, the commonly spoken about pain points of gravel are stone migration and extensive maintenance requirements. The closed cell design of Gravelrings locks gravel into the system, this feature prevents stone from dispersing and creating patchy areas. Superior surface stability is also achieved as wheelchairs and pushchairs can glide across the surface with ease, without loose gravel becoming trapped or lodged in the wheels.

DISCOVER MORE ABOUT GRAVELRINGS

The result is a discrete finish for your clients and reduced maintenance requirements as the gravel does not require regular raking back into place. Sloped areas are typically considered as unsuitable for gravel finishes, as the gradient can cause irregular coverage and stone can travel into client's homes. However, the closed cell structure of Gravelrings allows this system to be undeterred by sloped landscapes* (*subject to gradient).

SOLVING THE ISSUES OF A SLOPED DRIVEWAY

Gravelrings is a 25mm deep grid, the low depth requires less gravel to fill the panels, resulting in cost savings on gravel for both you and your clients. Exposed grids on a gravel driveway are an unsightly appearance and can be a concern for some clients exploring the option of installing a gravel driveway. Gravelrings mesh-backed base anchors the panels below the surface, to prevent gravel from mining its way beneath the grids, lifting them up and exposing them.

Installation is fuss-free, tiles come pre-assembled in 1m² panels and fit together with a simple but firm clipping mechanism, making Gravelrings an efficient system to install. For an additional layer of security, Gravelrings fixing pins can be used, which are particularly important on slopes and turning areas.
